

## Where did “Hibernate” go?

You can add the hibernate option to the “Power” option in “Settings”

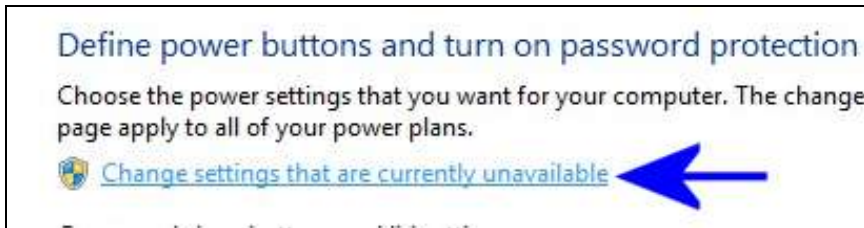

1. From the Start screen, start type “power” and click the “Settings” option.

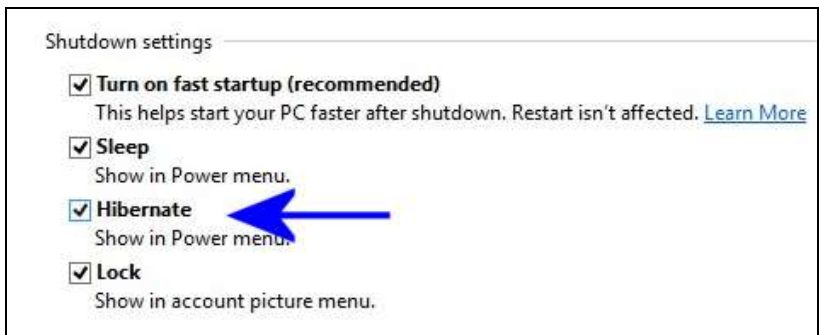

2. Click “power Options”.

3. Click “Change settings that are currently unavailable”.

4. Click the box beside “Hibernate”.

5. Click “Save changes”.

Now your power options should include “Hibernate”.
